

Projects That Will NOT Be Accepted

The following types of projects will generally **not** be approved unless they incorporate substantial innovation, advanced computing techniques, or intelligent features.

1. Simple CRUD-Based Management Systems

Projects that only perform Create, Read, Update, Delete (CRUD) operations without any advanced functionality are not acceptable.

Examples include:

- Student Management System
- Library Management System
- Hospital Management System
- School Management System
- Inventory Management System
- Payroll System
- Employee Management System
- Hotel Management System
- Pharmacy Management System
- Hostel Management System
- Attendance Management System
- Fee Management System
- Restaurant Management System
- Vehicle Management System
- Clinic Management System

2. Simple E-Commerce Websites

Projects that merely provide:

- Product listings
- Shopping cart
- Checkout
- Basic payment integration

without intelligent features or advanced analytics.

3. Basic CMS or Blogging Websites

Examples:

- News Portal
- Blogging Website
- College Website
- Portfolio Website
- Company Website
- Tourism Website

unless they contain advanced AI-powered capabilities.

4. Simple Mobile Applications

Applications that only display information or perform basic data entry without solving a significant technical problem.

5. Projects Based on Templates

Projects developed primarily from purchased or freely available templates with minimal original development.

6. Clone Projects

Projects that are direct copies of:

- Existing commercial applications
- GitHub repositories
- Previous FYPs
- YouTube tutorials

without significant enhancement or research contribution.

7. Projects with Minimal Technical Complexity

Projects that:

- Have limited functionality
- Do not involve algorithmic design
- Lack system architecture
- Do not demonstrate software engineering practices

Characteristics of Acceptable Projects

Approved FYPs should include one or more of the following:

Artificial Intelligence (AI)

Examples:

- Intelligent Chatbots
- Recommendation Systems
- Predictive Analytics
- AI Assistants
- Generative AI Applications
- Intelligent Decision Support Systems

Machine Learning / Deep Learning

Examples:

- Disease Prediction
- Student Performance Prediction
- Fraud Detection
- Price Prediction
- Crop Yield Prediction
- Image Classification

Computer Vision

Examples:

- Face Recognition
- Object Detection
- Vehicle Detection
- Medical Image Analysis
- OCR Systems

Natural Language Processing (NLP)

Examples:

- Sentiment Analysis
- Resume Screening
- Document Summarization
- Question Answering
- Language Translation

Cybersecurity

Examples:

- Intrusion Detection Systems
- Malware Detection
- Security Monitoring Dashboards
- Threat Intelligence Platforms
- Security Automation

Internet of Things (IoT)

Examples:

- Smart Agriculture
- Smart Home Automation
- Smart Healthcare
- Smart Traffic Monitoring
- Environmental Monitoring

Cloud Computing

Projects involving:

- Cloud-native architecture
- Distributed applications
- Serverless computing
- Cloud security

Blockchain

Examples:

- Secure Voting
- Supply Chain Traceability
- Digital Certificates
- Land Record Management

Data Science & Analytics

Examples:

- Predictive Dashboards
- Business Intelligence
- Big Data Analytics
- Customer Behavior Analysis

Robotics and Automation

AR/VR Applications

Smart City Solutions

Healthcare Informatics

FinTech Applications

Innovation Requirement

Every FYP proposal must clearly explain:

- What problem is being solved?
- Why is the solution needed?
- What makes the proposed solution innovative?
- How does it improve upon existing solutions?

- Which emerging technologies are being used?
- What measurable impact is expected?

Preferred Technologies

Students are encouraged to integrate:

- Artificial Intelligence
- Machine Learning
- Deep Learning
- Generative AI (LLMs)
- Computer Vision
- Natural Language Processing
- Cloud Computing
- Blockchain
- IoT
- Cybersecurity
- Big Data Analytics
- DevOps
- Docker
- Microservices
- APIs
- Mobile Computing
